

# LEAP's New Technologies

To keep pace with the advancement of technology and changing needs of students, LEAP is proud to be the first drug prevention education organization in Hong Kong to apply the Augmented Reality (AR) and Kinect technologies to its educational programme. Through special motion sensors and advanced code scanners, students can learn about health and drugs in a fun and unique way. Here are some of the students' favourites.....

## Body Science

This activity allows students to choose virtual body organs to visualize anatomical information.

## Food Detective

Students flip through LEAP's interactive cookbook to find out the nutritional values inside foods.

## Cigarette Inside Out

Students examine the harmful ingredients inside a cigarette in an immersive way.
